

METHODS AND SYSTEMS FOR EQUIPMENT
LEASE PROCESSING AND MANAGEMENT

ABSTRACT OF THE DISCLOSURE

A method for equipment lease processing and management, using a network-based system and at least one client system configured to communicate with the network-based system. The method includes providing a lease application on the network-based system, the lease application configured to be completed using the client system, and submitted to the network using the client system. The method also includes processing a completed lease application using the network based system, and displaying on the client system the results of said processing of the completed lease application, using the network-based system.
